Executive Summary

The analysis identified terraform-vault (ec2) as the most likely root cause. Its network_in_bytes deviated 4089% from baseline approximately 29.7 minutes before the primary anomaly was triggered on test/status_check_failed_instance. Cascading effects were observed on: terraform-vault/network_out_bytes, terraform-vault/network_packets_in, terraform-vault/network_packets_out.

Recommended Actions

1. Investigate CPU/memory pressure on terraform-vault
2. Check for runaway processes or scheduled jobs that triggered at this time
3. Consider auto-scaling policy review if CPU was the trigger
4. Validate that cascading resources have returned to normal baseline values
5. Acknowledge this anomaly in the dashboard once remediation is confirmed
