## Executive Summary

The analysis identified test (ec2) as the most likely root cause. Its `cpu_utilization_percent` deviated 157% from baseline approximately 28.0 minutes before the primary anomaly was triggered on `test/status_check_failed_instance`. Cascading effects were observed on: `test/network_in_bytes`, `test/network_packets_in`, `terraform-vault/network_in_bytes`.

Metric Trend Charts

Recommended Actions

- 1. Investigate CPU/memory pressure on test
- 2. Check for runaway processes or scheduled jobs that triggered at this time
- 3. Consider auto-scaling policy review if CPU was the trigger
- 4. Validate that cascading resources have returned to normal baseline values
- 5. Acknowledge this anomaly in the dashboard once remediation is confirmed
